SKILLS

Mobile

Kotlin	Good
Jetpack Compose	Good

Backend

Python	Good
FastAPI	Good

Data

SQL Server	Good
Supabase	Basic

Foundations and tools

Git and GitHub	Good
C# .NET	Basic
HTML CSS JS	Basic
Team lead	Basic
Network, security	Basic

INTERESTS

Gaming, listening to music, vibe coding

Phạm Gia Khiêm Ryuu・リュウ

Android & Backend Developer

CAREER GOAL

Third-year Information Technology student looking for an internship where I can try both Android and Backend before choosing a specialty, learn solid system architecture, optimize real-world performance and improve my technical English.

EDUCATION

University of Transport and Communications HCMC (UTH)

Information Technology, third-year student

Data structures and algorithms, multi-platform programming (C#, Kotlin), computer networking, relational databases, security basics, Git and GitHub.

PROJECTS

Smart Heritage

30-day MVP, team of 5

Role: Team lead, Backend and DB

A smart museum guide using iBeacon: the phone recognizes an artifact within 2 m, plays a Vietnamese or English audio guide, and managers get a visit analytics dashboard.

- Led a team of 5: split the work, tracked progress through milestones M0 to M8 and integrated everyone's parts.
- Designed the SQL Server 2022 database with 6 tables (Users, Sites, Artifacts, Beacons, Visit_logs, Feedbacks) and sample data.
- Built the FastAPI backend (Python 3.12): registration, JWT login and the ADMIN, CONTENT_MANAGER, VISITOR roles.
- Designed the beacon-resolve API that returns artifact content and the MP3 guide link in the visitor's language.

Tech: Kotlin, Jetpack Compose, FastAPI, SQL Server 2022, React + TypeScript, iBeacon (BLE) · github.com/KhiemPham1512/SmartHeritage

Lost & Found

In progress, team of 3

Role: Backend and DB

An app that helps people who lost an item and people who found one reach each other, with owner verification and a private chat instead of public comments, to reduce impersonation and abuse.

- Designed the database schema on Supabase (PostgreSQL), including image storage policies.
- Built the FastAPI REST API: sign-up, profile, phone update, and Lost and Found posts.
- Implemented the ownership verification flow: the finder sets 1 to 3 questions, the claimant answers, and the author approves before a private chat opens.
- Deployed the backend to Render (develop branch) and tested every endpoint through the Swagger docs.

Tech: Kotlin, Jetpack Compose, FastAPI, Supabase (PostgreSQL), React + TypeScript, Render · github.com/KhiemPham1512/Lost-Found

ACTIVITIES AND EXPERIENCE

Team lead, Smart Heritage project

Led a team of 5 building an iBeacon-powered automatic audio guide; planned the work in milestones M0 to M8 over 30 days.

Part-time job

Studying while working, practicing time management and responsibility.
